## Abstract

This document proposes a vocabulary for modeling of informational and behavioural properties of Web APIs. It serves as one of the building blocks of DASP framework, whose primary goal is achieving fine-grained cross-domain security management for heterogenous environments and intelligent agents.

## Table of contents

- 1. [Introduction](#)
  - 1.1. [Namespace declarations](#)
- 2. [DASP-Core Vocabulary: Overview](#)
- 3. [DASP-Core Vocabulary: Description](#)
- 4. [Cross reference for DASP-Core Ontology classes, properties and dataproperties](#)
  - 4.1. [Classes](#)
  - 4.2. [Object Properties](#)
  - 4.3. [Data Properties](#)
- 5. [References](#)

## 1. Introduction

[back to ToC](#)

Due to diverse implementation approaches and non-existence of unifying standards, APIs in practice expose their functionalities in a broad variety of ways, relying on a resource-oriented or RPC-like approaches, and often combining them into hybrid APIs. While several proposals have been made on structurally exposing interfaces of web services, their primary motivation was the description of web services for the purpose of automated composition and integration. In the scope of this work we address the lateral challenge of cross-domain security automation in and resource management for various contexts. We introduce domain-specific vocabularies that enable the modelling of different aspects of web services, security policies, protocols and agent-based interactions. This document presents working draft of DASP-Core vocabulary, which is intended to establish modular Web API descriptions for the purpose of unified, collaborative and multi-organizational security management.

## 2. DASP-Core Vocabulary: Overview

[back to ToC](#)

This ontology has the following classes and properties.

### Classes

<a href="#">Access Method</a>	<a href="#">Action</a>	<a href="#">Dynamic Path Element</a>	<a href="#">Element</a>	<a href="#">Element Extractor</a>
<a href="#">Entity Selector</a>		<a href="#">HTTP DELETE method</a>		<a href="#">HTTP GET access method</a>
<a href="#">HTTP HEAD access method</a>		<a href="#">HTTP OPTIONS access method</a>		<a href="#">HTTP POST access method</a>
<a href="#">HTTP PUT access method</a>	<a href="#">Parameter</a>	<a href="#">Request Body Parameter</a>		<a href="#">Request Header Parameter</a>
<a href="#">Request Parameter</a>	<a href="#">Request URL Query Parameter</a>	<a href="#">Resource</a>		<a href="#">Response Header Parameter</a>
<a href="#">Response Parameter</a>	<a href="#">Service</a>	<a href="#">Static Path Element</a>	<a href="#">Transformation</a>	<a href="#">URL Path Object</a>

### Object Properties

<a href="#">affectsResource</a>	<a href="#">appliesOver</a>	<a href="#">hasAction</a>	<a href="#">hasElement</a>	<a href="#">hasElementContainer</a>	<a href="#">hasMethod</a>
<a href="#">hasURLPath</a>	<a href="#">hasURLPath:1</a>	<a href="#">hasURLPath:2</a>	<a href="#">hasURLPath:3</a>	<a href="#">hasURLPath:4</a>	<a href="#">hasURLPath:4</a>
<a href="#">hasURLPath:5</a>	<a href="#">hasURLPath:6</a>	<a href="#">hasURLPath:7</a>	<a href="#">hasURLPath:8</a>	<a href="#">isElementOf</a>	
<a href="#">isProducedByAction</a>	<a href="#">supportsParameter</a>	<a href="#">supportsTransformation</a>

<a href="#">hasContentExtractionRule</a>	<a href="#">hasJSONPathContentExtractionRule</a>	<a href="#">hasMutableEffect</a>
<a href="#">hasXMLPathContentExtractionRule</a>		

### 3. DASP-Core Vocabulary: Description

[back to ToC](#)

The emergence of technologies and business models that extensively rely on cross-domain resource sharing raised new challenges concerning the governance and security of these processes. Due to the increasing degree of cross-system dependence and platform diversity, security management of resources hosted at various third parties becomes progressively complex and costly endeavor. The significance of this problem is recognized in the recent public initiatives that aim to provide reusable tools and standards for cloud-based security management [CSA].

In our work we focus on advancing security of complex interactions performed in the scope of Web-APIs, which represent a prevailing building block of inter-organizational collaborations [API16,REST14]. For this purpose we establish a Data Sharing and Processing Framework (DASP), which consists of conceptual framework, architectural and interaction models. They are complemented with semantic vocabularies, supporting tools and validation models that support implementation and integration of the framework.

In this document we present DASP-Core vocabulary, which aims at providing a non-exhaustive base for specifying information and behavioural models of Web APIs. By specifying the models of Web APIs involved parties enable the efficient and interoperable security management of resources distributed across different organizations.

### 4. Cross reference for DASP-Core Ontology classes, properties and datatypes

[back to ToC](#)

This section provides details for each class and property defined by DASP-Core Ontology.

#### 4.1. Classes

<a href="#">Access Method</a>	<a href="#">Action</a>	<a href="#">Dynamic Path Element</a>	<a href="#">Element</a>	<a href="#">Element Extractor</a>
<a href="#">Entity Selector</a>		<a href="#">HTTP DELETE method</a>		<a href="#">HTTP GET access method</a>
<a href="#">HTTP HEAD access method</a>		<a href="#">HTTP OPTIONS access method</a>		<a href="#">HTTP POST access method</a>
<a href="#">HTTP PUT access method</a>	<a href="#">Parameter</a>	<a href="#">Request Body Parameter</a>		<a href="#">Request Header Parameter</a>
<a href="#">Request Parameter</a>	<a href="#">Request URL Query Parameter</a>	<a href="#">Resource</a>		<a href="#">Response Header Parameter</a>
<a href="#">Response Parameter</a>	<a href="#">Service</a>	<a href="#">Static Path Element</a>	<a href="#">Transformation</a>	<a href="#">URL Path Object</a>

**Access Method**<sup>c</sup> [back to ToC or Class ToC](#)

---

**IRI:** <http://www.daspsec.org/o/dasp-core#AccessMethod>

Represents an access method used to access a resource

---

**has super-classes**

[thing](#)<sup>c</sup>

**has sub-classes**

[HTTP DELETE method](#)<sup>c</sup>, [HTTP GET access method](#)<sup>c</sup>, [HTTP HEAD access method](#)<sup>c</sup>, [HTTP OPTIONS access method](#)<sup>c</sup>, [HTTP POST access method](#)<sup>c</sup>, [HTTP PUT access method](#)<sup>c</sup>

**is in range of**

[hasMethod](#)<sup>op</sup>

---

## Action<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Action>

Intent or operation executed over a resource using a combination of resource's endpoint, HTTP access method and other parameters

### has super-classes

[thing](#)<sup>c</sup>

### is in domain of

[affectsResource](#)<sup>op</sup>, [hasMethod](#)<sup>op</sup>, [hasMutableEffect](#)<sup>dp</sup>, [hasURLPath](#)<sup>op</sup>, [hasURLPath:1](#)<sup>op</sup>, [hasURLPath:2](#)<sup>op</sup>, [hasURLPath:3](#)<sup>op</sup>, [hasURLPath:4](#)<sup>op</sup>, [hasURLPath:5](#)<sup>op</sup>, [hasURLPath:6](#)<sup>op</sup>, [hasURLPath:7](#)<sup>op</sup>, [hasURLPath:8](#)<sup>op</sup>, [supportsParameter](#)<sup>op</sup>, [supportsTransformation](#)<sup>op</sup>

### is in range of

[appliesOver](#)<sup>op</sup>, [hasAction](#)<sup>op</sup>, [isProducedByAction](#)<sup>op</sup>

## Dynamic Path Element<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#StaticPathElement>

URL Path Object whose value varies according to predefined template

### has super-classes

[URL Path Object](#)<sup>c</sup>

## Element<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Element>

Entity consisted in a resource, represented as a data segment that can be retrieved from the resource representation

### has super-classes

[Resource](#)<sup>c</sup>

## Element Extractor<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#ElementExtractor>

Provides a mechanism to extract a particular element from its container context (resource or action). Typically, the provided mechanism is a language rule that is applied over a *Resource* or an *Action* to retrieve the data representation of the *Element*.

### has super-classes

[thing](#)<sup>c</sup>

### is in domain of

[hasContentExtractionRule](#)<sup>dp</sup>, [hasElementContainer](#)<sup>op</sup>, [hasJSONPathContentExtractionRule](#)<sup>dp</sup>, [hasXMLPathContentExtractionRule](#)<sup>dp</sup>, [isProducedByAction](#)<sup>op</sup>

## Entity Selector<sup>C</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Selector>

Describes call parameters necessary to obtain a list of instances of an element or a resource. Typically applied to derive a minimalistic view of a resource.

**has super-classes**

[thing](#)<sup>C</sup>

## HTTP DELETE method<sup>C</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** [http://www.daspsec.org/o/dasp-core#HTTP\\_DELETE](http://www.daspsec.org/o/dasp-core#HTTP_DELETE)

HTTP DELETE method is typically applied to delete a resource or its representation

**has super-classes**

[Access Method](#)<sup>C</sup>

## HTTP GET access method<sup>C</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** [http://www.daspsec.org/o/dasp-core#HTTP\\_GET](http://www.daspsec.org/o/dasp-core#HTTP_GET)

HTTP GET access method is typically applied to retrieve a resource

**has super-classes**

[Access Method](#)<sup>C</sup>

## HTTP HEAD access method<sup>C</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** [http://www.daspsec.org/o/dasp-core#HTTP\\_HEAD](http://www.daspsec.org/o/dasp-core#HTTP_HEAD)

HTTP HEAD access method, typically used to retrieve metainformation about the resource

**has super-classes**

[Access Method](#)<sup>C</sup>

## HTTP OPTIONS access method<sup>C</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** [http://www.daspsec.org/o/dasp-core#HTTP\\_OPTIONS](http://www.daspsec.org/o/dasp-core#HTTP_OPTIONS)

HTTP OPTIONS access method, typically used to retrieve information, supported options and capabilities of the service or its exposed resources

**has super-classes**

[Access Method](#)<sup>C</sup>

## HTTP POST access method<sup>C</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** [http://www.daspsec.org/o/dasp-core#HTTP\\_POST](http://www.daspsec.org/o/dasp-core#HTTP_POST)

HTTP POST access method, typically applied to submit a resource or command parameters

**has super-classes**

[Access Method](#)<sup>C</sup>

## HTTP PUT access method<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** [http://www.daspsec.org/o/dasp-core#HTTP\\_PUT](http://www.daspsec.org/o/dasp-core#HTTP_PUT)

HTTP PUT access method, typically applied to change a resource

**has super-classes**

[Access Method](#)<sup>c</sup>

## Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Parameter>

A structured data item that is used to provide a particular input parameter (to the service) or output parameter (to the accessing client)

**has super-classes**

[thing](#)<sup>c</sup>

**has sub-classes**

[Request Parameter](#)<sup>c</sup>, [Response Parameter](#)<sup>c</sup>

**is in range of**

[supportsParameter](#)<sup>op</sup>

## Request Body Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#RequestBodyParameter>

Input parameter item provided to the service using a request body

**has super-classes**

[Request Parameter](#)<sup>c</sup>

## Request Header Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#RequestHeaderParameter>

Input parameter item provided to the service using a HTTP request header

**has super-classes**

[Request Parameter](#)<sup>c</sup>

## Request Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#RequestParameter>

Input parameter provided to the service, usually by trying to access its resource by invoking an exposed action

**has super-classes**

[Parameter](#)<sup>c</sup>

**has sub-classes**

[Request Body Parameter](#)<sup>c</sup>, [Request Header Parameter](#)<sup>c</sup>, [Request URL Query Parameter](#)<sup>c</sup>

## Request URL Query Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#RequestURLQueryParameter>

Input parameter item provided to the service using an URL query item in the HTTP request

**has super-classes**

[Request Parameter](#)<sup>c</sup>

## Resource<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Resource>

Entity that is exposed by the service and directly accessible under some of its endpoints

**Example**

some example

**has super-classes**

[thing](#)<sup>c</sup>

**has sub-classes**

[Element](#)<sup>c</sup>

**is in domain of**

[hasElement](#)<sup>op</sup>

**is in range of**

[hasElementContainer](#)<sup>op</sup>, [isElementOf](#)<sup>op</sup>

## Response Header Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#ResponseHeaderParameter>

Output parameter provided from the service in HTTP response header

**has super-classes**

[Response Parameter](#)<sup>c</sup>

## Response Parameter<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#ResponseParameter>

Output parameter provided from the service, usually as a response to a request

**has super-classes**

[Parameter](#)<sup>c</sup>

**has sub-classes**

[Response Header Parameter](#)<sup>c</sup>

## Service<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Service>

Web service that exposes resources to the clients, broadly conforming to RESTful architectural style

**has super-classes**

[thing](#)<sup>c</sup>

## Static Path Element<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#DynamicPathElement>

URL Path Object with fixed value that stays stable for any underlying resource

**has super-classes**

[URL Path Object](#)<sup>c</sup>

## Transformation<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#Transformation>

Describes operation that can be dynamically executed over resource or an action (its input or output). Transformation is typically applied to provide a contextually adjusted view of a resource.

**has super-classes**

[thing](#)<sup>c</sup>

**is in domain of**

[appliesOver](#)<sup>op</sup>

**is in range of**

[supportsTransformation](#)<sup>op</sup>

## URL Path Object<sup>c</sup>

[back to ToC](#) or [Class ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#URLPathObject>

Path element contained in URL endpoint

**has super-classes**

[thing](#)<sup>c</sup>

**has sub-classes**

[Dynamic Path Element](#)<sup>c</sup>, [Static Path Element](#)<sup>c</sup>

**is in range of**

[hasURLPath:1](#)<sup>op</sup>, [hasURLPath:2](#)<sup>op</sup>, [hasURLPath:3](#)<sup>op</sup>, [hasURLPath:4](#)<sup>op</sup>, [hasURLPath:5](#)<sup>op</sup>,  
[hasURLPath:6](#)<sup>op</sup>, [hasURLPath:7](#)<sup>op</sup>, [hasURLPath:8](#)<sup>op</sup>

## 4.2. Object Properties

<a href="#">affectsResource</a>	<a href="#">appliesOver</a>	<a href="#">hasAction</a>	<a href="#">hasElement</a>	<a href="#">hasElementContainer</a>	<a href="#">hasMethod</a>
<a href="#">hasURLPath</a>	<a href="#">hasURLPath:1</a>	<a href="#">hasURLPath:2</a>	<a href="#">hasURLPath:3</a>	<a href="#">hasURLPath:4</a>	<a href="#">hasURLPath:5</a>
<a href="#">hasURLPath:6</a>	<a href="#">hasURLPath:7</a>	<a href="#">hasURLPath:8</a>	<a href="#">isElementOf</a>		
<a href="#">isProducedByAction</a>	<a href="#">supportsParameter</a>	<a href="#">supportsTransformation</a>			

**affectsResource**<sup>OP</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#affectsResource>

Specifies a Resource or an Element that is affected by the Action. An entity is considered as affected if it gets exposed to the external client or it gets subjected to modifications that stem from the client's request.

This property may be added dynamically to the action based on parameters provided in the client request.

**has super-properties**

top object property

**has domain**[Action](#)<sup>C</sup>**has range**[Element](#)<sup>C</sup> or [Resource](#)<sup>C</sup>**appliesOver**<sup>OP</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#appliesOver>

Denotes the transformation that can be applied over an Action, Resource or its Element.

**has super-properties**

top object property

**has domain**[Transformation](#)<sup>C</sup>**has range**[Action](#)<sup>C</sup>**hasAction**<sup>OP</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#hasAction>

Denotes the *action* exposed by the [service](#). In other environments can be applied to denote the action as the goal or related entity.

**has super-properties**

top object property

**has range**[Action](#)<sup>C</sup>

**hasElement**<sup>op</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#hasElement>Denotes an *Element* that is contained in the *Resource*, or an *Element* that is extracted by the rules provided in *ElementExtractor***has super-properties**  
top object property**has domain**  
[Resource](#)<sup>c</sup>**has range**  
[Element](#)<sup>c</sup> or [Element Extractor](#)<sup>c</sup>**is inverse of**  
[isElementOf](#)<sup>op</sup>**hasElementContainer**<sup>op</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#hasElementContainer>Specifies the container entity that contains the *Element* dealt by the *Element Extractor*. Typically this entity is a *Resource* exposed by the *Service* through the *Action*.**has super-properties**  
top object property**has domain**  
[Element Extractor](#)<sup>c</sup>**has range**  
[Resource](#)<sup>c</sup>**hasMethod**<sup>op</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#hasMethod>Refers to the method used to describe an *Action*.**has super-properties**  
top object property**has domain**  
[Action](#)<sup>c</sup>**has range**  
[Access Method](#)<sup>c</sup>**hasURLPath**<sup>op</sup>[back to ToC](#) or [Object Property ToC](#)**IRI:** <http://www.daspsec.org/o/dasp-core#hasURLPath>Specifies the URL Path Object that is contained in the endpoint where a particular *Action* is exposed. Subproperties of this property denote each ordered *URLPath* item that is contained in the endpoint. Concatenated URL Path Objects referred from these properties represent a complete endpoint of the *Action*.**has super-properties**

[URL Path Object](#) <sup>C</sup>

---

[hasURLPath:7](#)<sup>OP</sup> back to [ToC](#) or [Object Property ToC](#)

---

**IRI:** <http://www.daspsec.org/o/dasp-core#hasURLPath:7>

---

**has super-properties**  
[hasURLPath](#) <sup>OP</sup>

**has domain**  
[Action](#) <sup>C</sup>

**has range**  
[URL Path Object](#) <sup>C</sup>

---

[hasURLPath:8](#)<sup>OP</sup> back to [ToC](#) or [Object Property ToC](#)

---

**IRI:** <http://www.daspsec.org/o/dasp-core#hasURLPath:8>

---

**has super-properties**  
[hasURLPath](#) <sup>OP</sup>

**has domain**  
[Action](#) <sup>C</sup>

**has range**  
[URL Path Object](#) <sup>C</sup>

---

## isElementOf<sup>OP</sup>

[back to ToC](#) or [Object Property ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#isElementOf>

Specifies the *Resource* that contains a particular *Element*.

**has super-properties**  
top object property

**has domain**  
[Element](#)<sup>C</sup> or [Element Extractor](#)<sup>C</sup>

**has range**  
[Resource](#)<sup>C</sup>

**is inverse of**  
[hasElement](#)<sup>OP</sup>

## isProducedByAction<sup>OP</sup>

[back to ToC](#) or [Object Property ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#isProducedByAction>

Specifies an *Action* whose output is considered as an container for *Element Extractor*. Note that *Action* may produce dynamic results depending on contextual conditions.

**has super-properties**  
top object property

**has domain**  
[Element Extractor](#)<sup>C</sup>

**has range**  
[Action](#)<sup>C</sup>

## supportsParameter<sup>OP</sup>

[back to ToC](#) or [Object Property ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#supportsParameter>

Specifies a parameter that is supported by the *Action*. This parameter can be provided by using various mechanisms, such as HTTP header or URL query parameter. The actual parameter is derived from the entity type of provided parameter.

**has super-properties**  
top object property

**has domain**  
[Action](#)<sup>C</sup>

**has range**  
[Parameter](#)<sup>C</sup>

## supportsTransformation<sup>op</sup>

[back to ToC](#) or [Object Property ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#supportsTransformation>

Denotes the *Transformation* supported by the *Action*. Transformation enables the redaction or other kind of modification of the message that is provided as an input to the *Action* (request), or its output (response).

**has super-properties**  
top object property

**has domain**  
[Action](#)<sup>c</sup>

**has range**  
[Transformation](#)<sup>c</sup>

### 4.3. Data Properties

[hasContentExtractionRule](#)

[hasJSONPathContentExtractionRule](#)

[hasMutableEffect](#)

[hasXMLPathContentExtractionRule](#)

## hasContentExtractionRule<sup>dp</sup>

[back to ToC](#) or [Data Property ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#hasContentExtractionRule>

Provides the abstract rule used by *Element Extractor* to extract its target *Element* from given container (*Resource* or *Action*).

**has super-properties**  
top data property

**has sub-properties**  
[hasJSONPathContentExtractionRule](#)<sup>dp</sup>, [hasXMLPathContentExtractionRule](#)<sup>dp</sup>

**has domain**  
[Element Extractor](#)<sup>c</sup>

**has range**  
string

## hasJSONPathContentExtractionRule<sup>dp</sup>

[back to ToC](#) or [Data Property ToC](#)

**IRI:** <http://www.daspsec.org/o/dasp-core#hasJSONPathContentExtractionRule>

Provides the JSON Path rule used by *Element Extractor* to extract its target *Element* from given container (*Resource* or *Action*). Note that this rule can be applied on to valid JSON documents.
